THE DURHAM POLICE DEPARTMENT

PRESENT:

AN INTRODUCTION TO DIGITAL IMAGING

Durham Police Department is proud to announce that it is hosting a *basic three-day*, hands-on training program in forensic digital imaging **February 15 – 17, 2011**. This class will be held at the Durham Police Department in Durham, NC.¹

This *basic three-day* course will provide participants with a basic understanding of the Microsoft® Windows® environment as well as develop an understanding of Adobe® Photoshop®. In addition, participants will have a complete understanding of forensic digital imaging concepts and how these concepts can aid in the investigative process. Participants will benefit from applying these newly learned concepts in a practical exercise using their own images!

More specifically, this hands-on training program focuses on the **basic** concepts and techniques for enhancing your digital images, including preparing proof sheets, court exhibits and more. It will also provide a firm foundation of digital imaging concepts as well as deliver an indispensable understanding of and hands-on experience with the most commonly used image enhancement tools. For example, you will learn how to scale digital images for accurate, life-size output as well as learn the recommended procedures for enhancing various types of images for maximum image quality and contrast. You will also learn how and when to apply different techniques to remove background noise as well as how to enhance contrast to bring out ridge detail that is barely visible to the human eye.

David Witzke, better known as Ski, has more than 15 years of experience with forensic digital imaging and AFIS technologies. His extensive background covers all facets of software development, user and technical documentation development, systems integration and installation, technical support, and training. Ski has been conducting forensic digital imaging training programs for law enforcement agencies at all levels (local, state and federal) throughout the United States, Canada and England for more than eight years. He has an established reputation in forensic image processing and is frequently a guest speaker at regional and international conferences in the United States and abroad. He has also taught forensic digital image processing for the Latent Print Program at the FBI Academy in Quantico, Virginia as well as at the British Columbia Institute of Technology in Vancouver, British Columbia, Canada for more than five years.

¹ Participants must attend all three days of training. It is also recommended that each person attending this program have at least a basic understanding of the Microsoft Windows NT, 2000, ME, or XP operating system.
